Dear Colleagues,

The subject of renal cell carcinoma (RCC) has been on the agenda of the Instituto de Educação Médica (Institute of Medical Education) for some time now. However, recent, promising developments in therapy have now brought the issue even more to the forefront. Indeed, the subject of renal cell carcinoma promises to be one of the most hotly disputed areas in urology and in medicine in general. Given its timeliness and importance, the IEM decided it was high time to organize a course on the subject.

I have invited two renowned clinicians, Dr. Carlos Carvalho, medical oncologist of the Fernando Fonseca Hospital in Lisbon and Prof. Arnaldo Figueiredo, a urologist from the Department of Urology at Coimbra University Hospital, to join me as the course's coordinators.

All the basics of RCC will be discussed. Minimally invasive, as well as surgical and medical therapy will be dealt with. In order to shed further light on the issue, we have invited a number of distinguished Portuguese and foreign experts who will certainly provide a better understanding of where we stand in the diagnosis and treatment of renal cell carcinoma.

We heartily invite you to attend. The knowledge and experience of the speakers we have selected will, beyond question, open new windows on the issue, helping us to choose the most appropriate methods of diagnosis and treatment for this form of cancer.
